Labs with sampling.pdf

Round 4 is lab facilities with sampling requirements. 4 permits are issued to:

- Hitachi
- Chemocentryx
- (2) Medimmune (319 Bernardo operations have ceased)

Subject: Follow-up EPA data request to City of Mtn View

Hi Alison,

EPA has a few follow-up items we need. Please provide

- Copy of 501 Ellis Street (NEC/Renexas/Geosyntec) industrial waste water permit

including permit discharge requirements/limits, and any reporting data, as well as any other industrial discharge permits to the Ellis St, Whisman Road, or Fairchild Drive sanitary sewer trunk lines in the area.

- Planned / priority replacement schedule of the Fairchild Drive sewer trunk lines, National Avenue, Ellis Street, N Whisman Road

- Clarification/Confirmation on previous (e.g. questions about the abandoned line at 100 Ferguson and whether the Moffett and Leong sewer lines ever connected).

- Abandoned line at the former GTE Facility (100 Ferguson Dr)

- o The GIS data indicates that there is an abandoned line that extends approx. 340 feet. When was this line abandoned? Why was it abandoned? Was it abandoned in place?). City: *Please provide a vicinity map* **EPA: See attached map (20140408_100Ferguson)**

- Moffett Blvd and Leong Sewer lines

- o Did the Moffett Blvd and Leong sewer lines ever connect? For example, was there ever a line connecting manholes F5-067 and F5-073?

City: Don't understand question? I don't see F5-67 Look at F5 system map. Moffett Blvd was renamed Leong when the freeway connector was constructed . The freeway connector was named Moffett Boulevard and the State typically doesn't allow for longitudinally placed utilities

- o **EPA: The attached map highlights the F5-067 and F5-073 manholes (20121017_F5_Sanitary Sewer Map_[967]_Markup). The 1960 as -build posted to Dropbox (Record drawing 2660) seems to show that the sewer lines did not connect. However, please confirm.**

Thanks for all your help in providing all the information. Please let me know if you have any questions.
